Does San Diego International Airport have a battery energy storage system?

San Diego International Airport (SAN) is the first airport in the United States to install an ENGIE Storage battery energy storage system. Both ENGIE and SAN are members of Cleantech San Diego. The 2 MW/4 MWh GridSynergy energy storage system furthers the airport's long-term commitment to efficiency and sustainability.

Why is energy storage important for San Diego International Airport?

"The San Diego International Airport is taking significant steps to reduce their carbon footprint and energy storage is playing an important role in their success," said Christopher Tilley, chief executive officer at ENGIE Storage.

How will San Francisco's new energy storage system work?

Paired with the airport's existing photovoltaic solar system, the new energy storage system will reduce energy charges during peak demand which equate to approximately 40 percent of the airport's monthly electricity costs. The system is expected to begin operation in early 2020. SAN is widely regarded as a leader for its sustainability efforts.

How will the airport benefit from a solar array?

The expansion included the airport's first solar array. In 2016-17, the airport installed additional arrays throughout its campus, totaling 5.5 MW of solar generation (PV). The battery storage system will allow the airport to realize additional significant financial benefits from its campus-wide PV portfolio.

San Diego International (SAN) has become the first U.S. airport to install the battery energy storage system from Santa Clara, CA-based ENGIE Storage, furthering its long-term ...

While San Diego Airport owns the batteries, Critical Loop's operations are primarily software-driven, utilizing proprietary software on an on-site controller to predict, manage, and monitor battery ...

As operators of San Diego International Airport (Airport), the Authority recognizes the complex link between energy performance and the security of their airport enterprise, and are keenly aware that ...

Automatic integrated energy storage cabinet used at san diego airport

Critical Loop delivers a unified power control platform managing its battery energy storage system in concert with on-site solar on the SAN campus with intelligent automation. Using a ...

Paired with the airport's existing photovoltaic solar system, the new energy storage system will reduce energy charges during peak demand which equate to approximately 40 percent of ...

San Diego International Airport (SAN) is the first airport in the United States to install an ENGIE Storage battery energy storage system. Both ENGIE and SAN are members of Cleantech San Diego.

San Diego International Airport BESS is a battery storage project located in San Diego, California. It has a total capacity of 2 MW. It was built in June 2021 and is operated by ENGIE Storage Services NA LLC.

ENGIE Storage announced that San Diego International Airport (SAN) is the first airport in the United States to install one of its battery energy storage systems. The 2 MW/4 MWh ...

Paired with the airport's existing 5.5 MW of solar capacity, the new energy storage system will reduce energy charges during peak demand, which according to ENGIE equate to ...

San Diego International Airport in California will be home to a battery energy storage system paired with onsite solar PV that is set to reduce electricity costs as well as deliver much ...
