Bidirectional charging has so far been tested in a few pilot projects. In France, Renault, in partnership with The Mobility House, has launched the first vehicle-to-grid (V2G) service.

A newly released report by smartEn and DNV, named "V2X Enablers and Barriers: Assessment of the regulatory framework of bidirectional EV charging in Europe", analyses the EU and UK electric ...

Is bidirectional charging permitted in Europe? Find out here what challenges still exist and when bidirectional charging is coming.

These technical requirements summarize a minimal and uniform set of recommendations for purchasing and operating smart and bidirectional charging infrastructure.

Bidirectional charging, where vehicles can be charged and also return electricity to the grid, is strongly encouraged due to its potential to help balance the electricity system. However, a ...

The SCALE project has published technical guidelines to help standardise smart and bidirectional charging infrastructure across Europe. The recommendations support EU climate goals ...

This document only considers conductive applications for bidirectional charging based on the Combined Charging System (CCS). In the future, other types of charging (inductive charging, ERS, MCS) may ...

Although both the technical and economic feasibility of smart and bidirectional charging applications depend fundamentally on the national framework conditions and regulations, scientific ...

By addressing these factors, the paper aims to provide an initial roadmap for realizing the practical benefits of bidirectional charging technology in Dresden's urban context, contributing to the city's ...

Bidirectional charging of outdoor telecom cabinets for european highways

The transformative potential of bidirectional charging capability in EVs across European and North American markets is one avenue to drive grid modernization and customer benefit through ...
