What is the European Commission doing about energy storage?

The European Commission in 2020 published a study on energy storage, which summarized some previous studies and reports, explored current and potential energy storage markets in Europe, and set out policy and regulatory recommendations for energy storage.

How does the EU support energy storage development?

State Aid and National Support for Storage EU guidelines under the Emissions Trading System (ETS) allow member states to support energy storage development through subsidies and other incentives. This approach supports a wide range of storage technologies and highlights the EU's commitment to fostering a balanced and adaptable energy ecosystem.

What are EU energy storage initiatives?

EU energy storage initiatives are a key part of advancing energy security and the transition toward a carbon-neutral economy, improving energy efficiency, and integrating renewable energy sources into electricity systems, and can play an integral role in balancing power grids and saving surplus energy.

Does energy policy need a long-term perspective?

Energy policy has always required a long-term perspective, as future generations depend on policymakers to ensure secure, reliable, and sustainable energy decisions. Energy policy has always required a long-term perspective, as future generations depend on policymakers to ensure secure, reliable, and sustainable energy decisions.

Summary: Belgium is accelerating its transition to clean energy with innovative storage policies. This article explores how new regulations, incentives, and technological advancements position Belgium ...

In this update, we provide an objective analysis of Belgium's evolving energy policy based on the respective government agreements. Energy policy has always required a long-term ...

Currently, Europe has around 85 gigawatts of energy storage systems in operation, a figure that needs to more than double to meet the EU's renewable energy targets for 2030. Without ...

Brussels policy on new energy and energy storage

Tracking monthly natural gas demand by country and the EU as a whole, with a breakdown of the power, industry and household sectors where possible. This dataset aggregates ...

The EU has developed a forward-thinking, supportive regulatory framework to encourage energy storage deployment as part of its ambitious clean energy and climate goals.

Discover the evolving policies and regulations of the European Union and United Kingdom, with both issuing landmark legislation in the energy storage.

The policy aims to balance three main objectives: reducing energy consumption, expanding reliable energy capacity and enhancing the competitiveness of the Belgian industry, which ...

Energy storage, in particular "behind the meter", can help consumers, both households and industries, to maximise self-consumption of self-produced renewable energy, making it possible ...
