This relatively small world is the most volcanically active body in the Solar System, with roughly 400 active volcanoes dotting its surface. These volcanoes erupt lava and gasses, sometimes ...

Solarvance delivers off-grid and hybrid solar systems tailored for challenging environments like Syria. Our systems offer dust-proof designs, salt resistance for coastal use, and battery options for 24-hour ...

The TMY, which consists of measured hourly values of a synchronous series of meteorological data, i.e. air temperature, relative humidity, atmospheric pressure, wind velocity, ...

By leveraging Syria's abundant solar irradiance, long sunny days, and vast desert land, this project provides a viable solution to meet the growing energy demands of cities such as ...

Located at an elevation of 692.57 meters (2272.21 feet) above sea level, Damascus has a Subtropical desert climate (Classification: BWh). The district's yearly temperature is 19.81°C (67.66°F) and it is ...

In this study, the effect of geographical and meteorological parameters on the monthly mean daily global solar radiation in Damascus was investigated.

This graphic shows the mean temperatures of various destinations in our solar system.

Located at an elevation of 692.57 meters (2272.21 feet) above sea level, ...

We mean waaaay out there in our solar system - where the forecast might not be quite what you think. Let's look at the mean temperature of the Sun, and the planets in our solar system.

Such mathematical models were derived for the heating season (November to April) and for the air-conditioning season (June to September) in Damascus zone. Moreover, a single model throughout a ...

Damascus high temperature solar system
