At the MIT Energy Initiative's Annual Research Conference, industry leaders agreed collaboration is key to advancing critical technologies amidst a changing energy landscape.

MIT engineers developed a membrane that filters the components of crude oil by their molecular size, an advance that could dramatically reduce the amount of energy needed for crude oil ...

The multi-level fire extinguishing system (PACK+cabinet-level space+explosion-proof plate) is safe and reliable, and the battery compartment and electrical compartment are isolated by a fireproof structure ...

The HTTP Cache-Control header holds directives (instructions) in both requests and responses that control caching in browsers and shared caches (e.g., Proxies, CDNs).

nocache - minimize filesystem caching effects The nocache tool tries to minimize the effect an application has on the Linux file system cache. This is done by intercepting the open and close ...

The .nocache.js file contains JavaScript code that resolves the Deferred Binding configurations (such as browser detection, for instance) and then uses a lookup table generated by the GWT Compiler to ...

In this report, fire hazards associated with lead acid batteries are identified both from a review of incidents involving them and from available fire test information.

The MIT-GE Vernova Climate and Energy Alliance, a five-year collaboration between MIT and GE Vernova, aims to accelerate the energy transition and scale new innovations.

A look at how AI can be used to help support the clean energy transition by helping to manage power grid operations, plan infrastructure investments, guide the development of novel ...

## Energy storage cabinet fire protection acceptance standards

Cache directive &quot;no-cache&quot; An explanation of the HTTP Cache-Control header The Cache-Control header is used to specify directives for caching mechanisms in both HTTP requests and responses. ...
