A study of duties on solar and wind components between 2011 and 2019 found no evidence of increased manufacturing jobs in these sectors, but jobs in installation, operation, and maintenance grew ...

In January 2025, importers paid a 50 percent tariff on Chinese solar panels and components. Under the series of tariffs from the beginning of the new administration, these rates ...

Importantly, countries that prioritize renewable energy may impose lower export taxes to facilitate market access. Conversely, nations aiming to protect their domestic industries may impose ...

Text released by the Senate Rules Committee no longer includes a new tax on solar and wind projects if some of their components come from China.

Should President Trump enact tariffs on wind turbines and parts at the 50% tariff rate on steel and aluminum imports, approximately \$385 million in costs would be incurred. Wind currently ...

Under the proposed bill, any wind or solar facility completed after 2027 will be taxed if it contains Chinese-made components. That includes panels, parts, and raw materials, many of which ...

A revised draft of the OBBB released this weekend provides for an entirely new excise tax on solar and wind projects that incorporate quantities of materials above a threshold that are ...

Two tax credits, the investment tax credit (ITC) and the production tax credit (PTC), directly support investment in wind and solar electric power. In the Congressional Budget Office's baseline ...

Combined with the latest international trade information in 2025 (such as HS code confirmation, Tax Rebates Adjustments, tariff developments, and quality-standard requirements), we ...

Export tax on solar and wind power components

Since 2018, the U.S. government has placed Section 301 tariffs on many Chinese products, including polysilicon, solar wafers, solar cells, solar modules, inverters, and other balance-of-module ...
