Huawei's roadmap assumes those costs fall by an order of magnitude as production scales beyond 1 GWh. Rather than building its own cell lines, the company says it will license the IP ...

Huawei has filed a patent for a new type of solid-state electric vehicle (EV) battery that could significantly change the future of clean transportation. The technology promises a driving range ...

Huawei has filed a patent detailing a sulfide-based solid-state battery design with energy densities between 180 and 225 Wh/lb, roughly two to three times higher than today's typical electric...

Huawei doesn't even make EV batteries, you might say -- and you'd be right. But they've been quietly getting serious about battery materials and electrolyte synthesis, signaling a deeper ...

The news of Huawei's solid-state breakthrough must make for sober reading to car-makers who have been developing them for the last decade, but have still not rolled out the tech for ...

In the filed patent, Huawei notes that by doping sulfide electrolytes with nitrogen, the company is developing a battery pack with enhanced electrochemical stability, improved safety and ...

According to the existing plan, the company expects to build a 1GWh solid-state battery production line by 2026, and complete the production of all-solid-state battery samples with an ...

Solid-state battery efforts might gain a significant boost from technology giant Huawei. The company patented a solid-state battery with an energy density between 400 Wh/kg and 500 Wh/kg.

Even though Huawei doesn't manufacture batteries, the company is putting plenty of R& D resources into developing a new solid-state battery tech. The newest patent reveals a battery pack that can go for ...

Huawei's lithium battery solutions enable intelligent energy storage and peak shifting, upgrading backup

Huawei pack battery production

power systems to improve flexibility and reliability.
