How much do solar panels cost?

As of 2026, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type, and installer.

How much does solar cost per watt?

The price per watt for larger and relatively straightforward projects are often within the \$2.50 to \$3 range. Claiming incentives like tax credits and rebates can bring the PPW even lower. However, the following factors may push your solar price per watt into the \$3 to \$4.50 range.

What is the relative cost of solar energy?

Another measure of the relative cost of solar energy is its price per kilowatt-hour (kWh). Whereas the price per watt considers the solar system's size, the price per kWh shows the price of the solar system per unit of energy it produces over a given period of time. $\text{Net cost of the system} / \text{lifetime output} = \text{cost per kilowatt hour}$

How much does a 7 kW solar system cost?

These costs are for a typical 7 kW residential system (\$19,873 average). Monocrystalline or polycrystalline panels are the most common types of solar panels. Most residential installations use monocrystalline photovoltaics (PV) panels, which offer up to 24% efficiency and perform better in limited space and extreme temperatures.

Historic Low Pricing: Solar costs have reached unprecedented lows in 2025, with systems ranging from \$2.50-\$3.50 per watt installed, making the technology more accessible than ever before.

Solar panels cost between \$2.55 and \$3.15 per watt. For an average 6.5 kW solar system, you'll spend anywhere from \$16,600 to \$20,500 before accounting for tax credits or rebates.

Solar prices across the world's most active residential, utility, and commercial PV (Photovoltaics) markets.

InfoLink Consulting provides weekly updates on PV spot prices, covering module price, cell price, wafer price, and polysilicon price. Learn about photovoltaic panel price trends and solar panel ...

Latest solar cell price per watt

The U.S. Department of Energy's solar office and its national laboratory partners analyze cost data for U.S. solar photovoltaic systems to develop cost benchmarks to measure progress towards goals and ...

Average price of solar modules, expressed in US dollars per watt, adjusted for inflation.

How much do solar panels cost in 2026? A 7.2 kW solar panel system costs \$21,816 before incentives or \$3.03 per watt of solar installed. The federal solar tax credit lowers solar system costs by \$6,544, ...

Compare quotes using "cost per watt." Like price per square foot for homes, this metric (typically \$2 to \$3 per watt) helps you compare solar companies fairly, regardless of system size.

Driven by rising silver prices, mainstream cell transaction prices have climbed to around RMB 0.42/W, with tier-1 producers quoting RMB 0.43-0.45/W. Current cell price levels are already ...

Today's premium monocrystalline solar panels typically cost between 30 and 50 cents per Watt, putting the price of a single 400-watt solar panel between \$120 to \$200, depending on how you buy it.
