The US Energy Storage Monitor is a quarterly publication of Wood Mackenzie Power & Renewables and the American Clean Power Association (ACP). Each quarter, new industry data is compiled into this ...

Solar and battery storage continue to set installation records, while wind energy has plateaued. Solar surpassed 2023's record installations in 2024, adding an estimated 39.6 gigawatts ...

Wind and solar combined overtake coal for the first time ever In 2024, wind and solar reached a record 17% (757 TWh) of US electricity, overtaking coal for the first time, which dropped to ...

Texas, California and other states continue setting wind, solar and battery storage records as utilities embrace cheaper, faster-to-build renewable sources.

Electrical Energy Storage (EES) systems store electricity and convert it back to electrical energy when needed. 1 Batteries are one of the most common forms of electrical energy storage.

Solar, wind, and storage accounted for 77% of all new power capacity installed. Utility-scale solar installations soared to 19.6 GW, with utility-scale projects leading the expansion. Energy ...

Here are the 25 biggest solar, wind, and battery-storage installations completed in the U.S. in 2024. Canary Media's chart of the week translates crucial data about the clean energy ...

The unabated wave of construction guarantees that China will continue leading in wind and solar installation in the near future, far ahead of the rest of the world.

This report was created using Cleanview's renewable energy tracking platform, which provides comprehensive monitoring of clean energy projects across the United States.

# Record of wind solar and energy storage construction

In 2025, we expect 7.7 GW of wind capacity to be added to the U.S. grid. Last year, only 5.1 GW was added, the smallest wind capacity addition since 2014. Texas, Wyoming, and Massachusetts will ...
