Why do we need battery energy storage systems in Spain?

Due to the large capacity of installed hydroelectric and thermal storage systems and the resilience of the Spanish power grid, the need for Battery Energy Storage Systems (BESS) in Spain has been relatively low. The lack of a clear regulatory framework for BESS has also hindered its development in Spain so far.

How much energy storage does Spain need in 2030?

The projected storage needs of Spain in 2030 are similar to those of the UK and Italy. In its National Energy and Climate Plan (NECP), the Spanish government aims to have 22.5GW of energy storage by 2030 (see table 1). This amount of storage capacity will be needed to integrate the growing capacity of intermittent generation.

What is Spain's regulatory framework for energy storage?

Spain's regulatory framework for BESS is set in its Strategy for Energy Storage. The Strategy identifies the required regulatory measures - such as grid access, market structure, and addressing double tolling - that are currently needed to ensure the deployment of a solid energy storage market.

How much energy storage capacity does Spain have?

When it comes to installed energy storage capacity in general, Spain is one of the leading countries within Europe (see figure 2). Currently, Spain has 6.3GW of hydroelectric and 1GW of thermal storage capacity installed. In fact, the non-BESS storage capacity in Spain is higher than in any other European country.

Our operations in Spain focus on the delivery of solar photovoltaic assets and independent engineering consultancy services to all types of renewable energy technologies, including battery storage systems.

System designed to cover average daily household consumption of ~35kWh, with surplus stored for evening and night use. Achieved 85% self-consumption ratio (solar + battery). ...

Empresarios Agrupados has more than 30 years of experience in the execution of turnkey projects (EPC). Our work philosophy fits the needs of our clients, resulting in their high levels of satisfaction ...

Perfect for residential backup power, renewable energy storage, small commercial operations, and remote installations. This system's compact size ensures ease of shipping and installation. As a plug ...

In this report, we explore Spain's potential to become a hot market for battery energy storage systems.

All-In-One 10kW 3-Phase Hybrid PV Inverter + Energy Storage System built with CATL LFP Battery (10,000 charging cycles) 20 kW PV input, 10 kW charging and 10 kW AC output Safe: Super stable ...

The future landscape of the Spain Energy Storage System EPC market is poised for sustained expansion, driven by technological innovation, policy support, and increasing project ...

In Spain, subsidies for storage will be granted through four calls under the PERTE ERHA1 scheme. The PERTE ERHA includes storage, renewables and hydrogen and it is funded by the European Union.

This year has been particularly active: 25 of these projects have seen developments in 2025, representing 1,335.62 MW moving forward with favourable environmental impact statements or ...
