Aiming at the different application scenario sets of wind and solar resources collaborative consumption, this paper proposes an optimal energy storage system configuration strategy that includes ...

This paper starts from the problem of siting and capacity of ESS, considers the economic performance of ESS with the RIES, and proposes an optimization method for multi-energy storage ...

This study presents a comprehensive thermo-economic and environmental analysis of an innovative air-inlet cooling system for combined cycle power plants utilizing ice-based thermal energy ...

This paper proposes a multi-objective economic capacity optimization model for GESS within a novel power system framework, considering the impacts on power network stability, ...

This paper presents a modelling and optimization framework for a hybrid electrochemical energy storage system (HESS) to enhance data centre power resilience. The system integrates ...

This study investigates the capacity optimization of cooling, heating, and electrical energy storage systems across multiple operational scenarios. A unified modeling framework and scenario ...

1 Introduction 2 System Models 3 Capacity Optimization Strategy 4 Results and Discussions 5 Conclusion  
Author Contributions  
Based on the existing research, a new capacity optimization strategy for ES system is deeply studied. The capacity allocation optimization problem of PV-wind complementary ES power generation system is solved. By adding DE algorithm to the PSO algorithm, the PSO algorithm can jump out of the local optimal solution through population variation, obta...

Optimal Capacity Configuration of Photovoltaic-Storage Power ... - MDPI  
To address the issues of high electricity costs for industrial loads in enterprise parks, significant peak-valley price differences, and insufficient utilization of renewable energy, a multi-objective capacity ...

To address the issues of high electricity costs for industrial loads in enterprise parks, significant peak-valley price differences, and insufficient utilization of renewable energy, a multi-objective capacity ...

In this paper, the goal is to ensure the power supply of the system and reduce the operation cost. The PV, wind and ES system models are analyzed.

Beyond this compulsory storage requirement, ESSs play a crucial role in various applications, including price-based demand response (PBDR) [4], peak shaving [5], integrated ...
