How much do Iran's energy subsidies cost?

In 2010, Iran's energy subsidies were estimated at around \$70 billion (Salehi-Isfahani et al 2015), a significant burden that contributed to fiscal deficits and hindered investment in critical infrastructure.

How efficient are thermal power plants in Iran?

Thermal power plants, which supply the majority of Iran's electricity, operate at an average efficiency exceeding 39.6 percent (Tehran Times 2025), far below global benchmarks. This inefficiency means that much of the energy input is wasted, leaving power plants ill-equipped to meet the heightened demand.

Will Iran's energy sector continue to impose economic and environmental costs?

This pattern underscores the inefficiencies generated by Iran's heavy energy subsidies and supports the argument that without structural reforms, Iran's energy sector will continue to impose economic and environmental costs on the nation.

Why is subsidy reform important in Iran?

The policy research to date has focused on subsidy removal, renewable energy integration, energy efficiency improvements, governance restructuring, and the role of international sanctions in shaping Iran's energy landscape. Subsidy reform is a particularly important and contentious topic due to its implications for Iran's economy.

Iran has leaned harder on Russia and China to stabilize its power sector and pursue long-term energy self-sufficiency, expanding nuclear plans and accelerating renewables deployment. ...

Despite the known relationship between prices and price elasticity, an increase in electricity prices as part of subsidy reform efforts may result in biased outcomes.

There are multiple factors behind Iran's current energy crisis, Shaffer explained. "First, domestic gas and electricity prices are set too low, effectively acting as a government subsidy to ...

Iran leads in providing fossil fuel subsidies, driving a 5 % annual growth in electricity consumption. Price and income elasticities of electricity demand have declined over time. Delays in ...

# Tehran energy storage power station electricity price subsidy

For new energy storage stations with an installed capacity of 1 MW and above, a subsidy of no more than 0.3 yuan/kWh will be given to investors based on the amount of discharge electricity ...

Based on these insights, the article proposes a strategic roadmap with immediate, medium-term, and long-term policy recommendations to stabilize the sector, most critical of which ...

This post explores the current state of Iran's new energy market, recent policies, key case studies in solar PV and energy storage, and the promising yet challenging road ahead.

As Tehran accelerates its transition to sustainable energy solutions, the electricity price subsidy for energy storage power stations has become a game-changer.

Regarding the economic- environmental benefits of using energy storage in the electricity industry, an investigation on the application of electrical network's energy storage with the aim of minimizing ...

Based on these insights, the article proposes a strategic roadmap ...
