-----

Absorbent Glass-Mat - Separator technology used in some sealed lead-acid batteries in which the glass-mat separator absorbs 100% of the electrolyte. Because of the immobilized electrolyte, an AGM ...

Cold cranking amps is a rating used in the battery industry to define a battery's ability to start an engine in cold temperatures. A large amount of amperes are needed to start the engine, but only for a short ...

However, understanding the car battery codes stamped on the battery can feel like deciphering a cryptic language. Fear not! This guide aims to demystify those alphanumeric sequences, empowering you to ...

It indicates the month and year the battery was manufactured in numeric form. For example, if the round sticker has 8/ 16 on it, it means the car battery was manufactured in August 2016.

**ELECTRONIC BATTERY TESTER** -- An electronic device that assesses the condition of a battery through an ohmic measurement such as resistance or conductance, typically without drawing large ...

**AB Battery System** - a single battery system that combines two different types of battery cells. Ah - the ampere-hour capacity of a battery pack is the total Ah capacity of the cells in one parallel group.

Standard battery nomenclature describes portable dry cell batteries that have physical dimensions and electrical characteristics interchangeable between manufacturers.

In this detailed guide, we will explain what the numbers and codes on car batteries mean, how to interpret them, and how they can help you pick the right battery for your vehicle.

Decode the meaning of your battery part number and letters code using this guide on the Atom Batteries Blog.

Each color represents a specific battery type or chemistries, such as alkaline, lithium, or nickel-cadmium. For example, a green color code may indicate that the battery is an alkaline battery, ...
